

Cities Revealed™

Data Services

Image to Information

In addition to the successful range of Cities Revealed aerial imagery and geographic data products The GeoInformation Group also deliver cost-effective professional geographic **Data Services** tailored to clients' individual project requirements.

Renowned for providing consultancy and training services to local and central government, over recent years the company has broadened its **Data Services** to include clients in the emergency services, telecommunications, media, transport and utilities industries.

Services

The services cover a broad range of applications that utilise Cities Revealed data and in-house expertise. Below are examples of the types of services The GeoInformation Group offer.

- Data Mapping
- Flood Modelling
- Scanning
- Spatial data collection and analysis
- Spatial data interpretation
- Data engineering
